Objective

Computer Science student at RV College of Engineering with strong foundations in Java, Python, and Data Structures. Seeking to contribute to Project SCRUB by applying programming and problem-solving skills to real-world autonomous systems and impactful engineering solutions.

Skills

Programming
Java (OOP, Multithreading), Python (OOP), C

Libraries & Tools
NumPy, Pandas, Matplotlib, Scikit-learn

Database
MySQL

Tools
VS Code, Git, GitHub, IntelliJ IDEA, PyCharm

Data Structures &Algorithms
Arrays, Sorting, Searching, Bit Manipulation

Education

RV College of Engineering (RVCE)
B.E. in Computer Science (2nd Semester)
CGPA: 9.85 / 10

Projects

Airline Management System (Java, JDBC, Swing, MySQL)
- Developed an airline application with account creation, transactions, and record management
- Built a GUI using Java Swing for user-friendly interaction
- Integrated MySQL database using JDBC for persistent data storage
- Implemented core airline booking features like booking, cancelling, and airline tracking
- Applied object-oriented design and modular architecture for scalability

Password Manager (Python)
- Built a secure password manager with master-password authentication
- Implemented file handling for persistent storage and retrieval
- Designed search functionality for efficient credential management

Task Manager CLI App
- Developed a command-line task manager with CRUD operations
- Structured task data for efficient updates and categorization
- Focused on clean and modular program design

Text-Based Adventure Game (Python)
- Created an interactive game with structured logic and modular functions
- Implemented dictionary-based navigation and decision system
- Demonstrated problem-solving and program design skills
